

Abstract of the Disclosure

Apparatus and methods for manufacturing a drug eluting stent are provided, whereby the stent comprises  
5 at least one tube having a lumen and a multiplicity of  
microscopic pores disposed in a lateral surface of the  
tube. The tube may be manufactured into any suitable  
stent configuration. The lumen of the tube is configured  
to retain a therapeutic agent that may be eluted through  
10 the multiplicity of pores into a vessel after deployment  
of the stent.
